

Everyone knows that automating manual processes is a sound business practice. Eliminating manual steps not only improves efficiency through streamlined processes, but also removes the opportunity for costly errors. Above all, the customer shopping experience is greatly enhanced when accurate, real-time information is available. And orders are processed lightning fast.

Connect with Confidence

ROI, a Sage Gold Development Partner, has been helping customers synchronize their Adobe Commerce (formerly Magento) carts to Sage 100 since 2009.

IN-SYNCH®, is a Sage 100 installed application that provides real-time, bi-directional data synchronization with Adobe Commerce. We can accommodate customers using just about any version of Sage 100 and its predecessors. IN-SYNCH is a flexible tool that can be used for multiple types of integration needs from just the basics to complex, customized systems.

Features & Benefits of Our Integration Solution

Proven - Our solutions are proven, mature, and bug-free. You can rest assured that you will not be our "trial and error" project.

Secure - Data exchanges are initiated and controlled from within the Sage 100 server, making IN-SYNCH the most secure architecture possible.

Bidirectional - Integrate and synchronize all relevant data between Sage 100 and the third-party system, whether the data originates in Sage 100 or the external system.

Real-time - Automatically synchronize changes and updates as they occur.

Independent - The two systems run independently, so if one happens to be down for maintenance, the other system stays up. The two will sync up automatically.

Lightning Fast - Efficient data mirroring methods are available for maximum speed.

Older Versions of Magento Supported

Our solutions can integrate with Magento 1x and Magento 2x, either hosted or the community version. If you are using Magento 1x and are not ready to move off the platform, ask us about a simple solution called Safe Harbor. Safe Harbor offers extensive support to cover what will be sunsetted by Magento's End of Life plan.

Sage 100 integration beyond Adobe Commerce

Our engineers can assess the solution needed to integrate your Sage 100 platform with e-commerce sites, 3PL, marketplaces, omni-channels, third-party shopping carts, custom sites or databases, and any other system. Because we completely understand the Sage 100 file structure and how to integrate using the third-party API we can perform most any type of integration necessary for Sage 100 customers.

We specialize in Sage 100 process automation, from intercompany transactions to tokenized credit card integration. IN-SYNCH is infinitely versatile, able to be expanded into complex solutions that will pay dividends for a return on your investment.

Integration Points:

Our Adobe Commerce integrations go from standard to very complex. The following are touch points that are available:

- Orders, Customers to Sage 100
- Tracking, Order Status, Inventory Quantities to Adobe Commerce
- Standard Pricing, Group Pricing, Customer Specific Pricing to Adobe
- Products (simple and complex) to Adobe Commerce
- Order History plug-in
- **And More!**

“

What People Are Saying

Our first integration project with ROI was in 2012. In 2015, we went through a replatform to the **Magento** platform and ROI earned the highest marks on the project completion survey! This gave us great confidence when we migrated to **Magento 2**.
